

“Lexbe’s pricing is much more reasonable and the software delivers what we need. I like the search and mark-up capabilities in the system to track and manage responsive documents. Lexbe’s support and services are also excellent and responsive whenever we need help.”

Partner

Meynardie and Nanney Law Firm

“Lexbe’s solution, pricing, and responsive support is beneficial to any small and mid-size law firm. I endorse it because it works - it’s fast, easy-to-use, and works on both Mac and Windows. We were going to use Relativity but it didn’t work on the Mac.”

Richard Brodsky  
Partner

The Brodsky Law Firm

Despite the increasing popularity of the Mac OS in corporate America, most eDiscovery and litigation document review software programs surprisingly still require the use of Microsoft Windows and Internet Explorer. This can be a source of great irritation and frustration for Mac-based law firms and users.

To do a sophisticated document review, Mac users are often told to set up their Apple® computers in ‘dual-boot’ mode or run Windows emulation software like ‘CrossOver’. Emulation software is expensive to install and slows down the entire computer making the review process irritating, slow and difficult. Plus, installing a dual-boot partition unnecessarily takes up a lot of hard disk space and transferring files between partitions is difficult. Finally, Mac programs are unavailable while in the Windows partition, reducing overall productivity as users switch back and forth between operating systems.

At the end of the day these Windows-centric solutions are cumbersome at best and can be practically unusable. Mac reviewers are forced into frustrating, slow and inefficient work environments. But Mac-based lawyers and staff have another choice. The Lexbe eDiscovery Platform is a leading solution in the legal industry allowing Mac-based users to handle eDiscovery and complex legal document review in a Mac environment natively and without penalty.

#### **Situation**

The Meynardie and Nanney Law Firm in Raleigh, North Carolina wished to find a sophisticated litigation document management system that worked natively on the Mac without the hassle, irritation and purchase requirement of additional software to emulate Windows solutions.

#### **Solution**

The Lexbe eDiscovery Platform runs natively on both Mac and PC software. For Mac users, Lexbe eDiscovery Platform requires only a recent version of Safari, Firefox or Chrome. Dual-boot or emulation software is not needed.

"Lexbe incorporates all of the major features you need in a comprehensive search tool for eDiscovery. Lexbe has also kicked it up a notch with their new UberIndex. While most search tools will certainly index the metadata and visible contents of files, Lexbe's UberIndex goes a bit further and will OCR any images that contain text embedded into Microsoft Word documents or PowerPoint presentations so you can search that text too (which could be extremely important!). The UberIndex also contains the translation of any non-English characters found in the documents.

Brett Burney, Esq.  
2018 eDiscovery Buyers Guide

There is no need to tie up large amounts of hard disk space with a Windows partition that limits the performance of your computer. For Mac users, all Lexbe eDiscovery Platform features are available without any software download or installation.

Meynardie and Nanney selected Lexbe because it provided the best solution for their Mac users. Because Lexbe's industry leading platform is in the cloud attorneys, paralegals and staff can access the system from their Mac based systems from any location and device via a standard browser.

Lexbe's cross-platform (PC and Mac) hosted litigation document management solution features the ability to self-upload and process case data for same day review in addition to lightning fast, advanced search and coding capabilities. The Lexbe eDiscovery Platform includes robust case analysis and timeline functionality in addition to online document processing capabilities. Lexbe clients can prepare productions quickly and in multiple formats to meet discovery deadlines and satisfy production requests.

Before selecting Lexbe, Meynardie and Nanney used another solution but quickly found that their costs were much higher than anticipated. "It quickly became clear that their 'all in price' really wasn't." said Bob Meynardie, partner at Meynardie and Nanney. "Lexbe's pricing is much more reasonable and the software delivers what we need. I like the search and mark-up capabilities in the system to track and manage responsive documents. Lexbe's support and services are also excellent and responsive whenever we need help."

For Paralegals, Litigation Support and IT professionals supporting attorneys, outside experts, or other Mac litigation professionals, Lexbe eDiscovery Platform lets users review documents in their favored Mac environment without additional software and workarounds.
